## ABSTRACT

## ACKNOWLEDGEMENTS

## NOTATION

## CHAPTER 1 – INTRODUCTION

<b>1.1</b>	<b>Jack-Up Units</b>	<b>1-1</b>
1.1.1	General	1-1
1.1.2	History	1-1
1.1.3	Considerations in Jack-Up Analysis Modelling	1-3
1.1.3.1	Structural Modelling	1-3
1.1.3.2	Modelling of Foundation Behaviour	1-4
<b>1.2</b>	<b>The Need for Further Research</b>	<b>1-5</b>
<b>1.3</b>	<b>Research Aims</b>	<b>1-6</b>
1.3.1	Foundation Modelling	1-6
1.3.2	Random Wave Modelling	1-7
1.3.3	Probabilistic Approach	1-8
<b>1.4</b>	<b>Thesis Outline</b>	<b>1-8</b>

## CHAPTER 2 - ANALYSIS OF JACK-UP UNITS

<b>2.1</b>	<b>Introduction</b>	<b>2-1</b>
<b>2.2</b>	<b>Literature Review of Jack-Up Analysis Techniques</b>	<b>2-1</b>
2.2.1	Dynamic Effects	2-2
2.2.2	Geometric Non-Linearities in Structural Modelling	2-3
2.2.3	Environmental Wave Loading	2-4
2.2.3.1	NewWave Theory	2-4
2.2.3.2	Constrained NewWave	2-5
2.2.3.3	Alternative Methods for Full Random Time Domain Simulation	2-6
2.2.4	Spudcan Footings – Models for Foundation Response	2-6
2.2.5	Overall Jack-Up Analysis – A Summary of Models Used	2-8
<b>2.3</b>	<b>Overview of JAKUP – The Analysis Program used in Thesis</b>	<b>2-10</b>
2.3.1	Dynamic Analysis	2-10
2.3.2	The Structural Model	2-11
2.3.3	The Foundation Model	2-11
2.3.4	Environmental Loading Models	2-11
2.3.4.1	Wave Loading	2-11
2.3.4.2	Wind Loading	2-13
<b>2.4</b>	<b>Example Structure used in Analyses</b>	<b>2-13</b>

## CHAPTER 3 - STRAIN HARDENING PLASTICITY MODEL FOR SPUDCANS ON DENSE SAND

<b>3.1</b>	<b>Introduction</b>	<b>3-1</b>
<b>3.2</b>	<b>Literature Review</b>	<b>3-1</b>

## Contents

3.2.1	Introduction - Combined Loading on Foundations	3-1
3.2.2	Traditional Bearing Capacity Theories	3-2
3.2.3	Alternative Yield Surface Loci	3-6
3.2.4	Concluding Remarks - Combined Loading on Foundations	3-6
3.2.5	Use of Plasticity Theory for Combined Loading of Offshore Foundations	3-7
<b>3.3</b>	<b>Development of Model C</b>	<b>3-9</b>
3.3.1	Introduction to Experimental Tests and Data	3-9
3.3.2	Elastic Response: Choice of an Elastic Stiffness Matrix	3-11
3.3.3	Development of a Strain Hardening Law	3-14
3.3.4	Development of a Three-Dimensional Normalised Yield Surface	3-15
3.3.5	Comparisons with Other Yield Surfaces	3-21
3.3.5.1	The Deviatoric/Normal Plane ( $H/V_0:V/V_0$ , $M/2RV_0:V/V_0$ or $Q/V_0:V/V_0$ )	3-21
3.3.5.2	The $\pi$ Plane ( $M/2RV_0:H/V_0$ )	3-21
3.3.6	Development of the Plastic Potential	3-22
3.3.6.1	Incremental Plastic Displacements at Yield: $\pi$ Plane	3-22
3.3.6.2	Incremental Plastic Displacements at Yield: Deviatoric/Normal Plane	3-24
3.3.6.3	Numerical Evaluation of Plastic Potential Size	3-33
3.3.6.4	Comments on Model C's Plastic Potential	3-34

## CHAPTER 4 – NUMERICAL FORMULATION OF MODEL C FOR THE ANALYSIS OF JACK-UP UNITS

<b>4.1</b>	<b>Introduction</b>	<b>4-1</b>
<b>4.2</b>	<b>Features of Model C</b>	<b>4-1</b>
4.2.1	General Structure of Model C	4-1
4.2.2	Numerical Formulation of Model C	4-2
4.2.3	Implementation of Model C in the FORTRAN Program OXC	4-5
<b>4.3</b>	<b>Retrospective Prediction of Experimental Tests</b>	<b>4-6</b>
4.3.1	Vertical Penetration Test	4-7
4.3.2	Moment and Horizontal Swipe Tests from $V \approx 1600$ N	4-7
4.3.3	Moment and Horizontal Swipe Tests from $V \approx 200$ N	4-8
4.3.4	Constant Vertical Load Tests	4-9
4.3.5	Radial Displacement Tests	4-10
<b>4.4</b>	<b>Considering the Conical Shape of Spudcans</b>	<b>4-11</b>
4.4.1	Vertical Bearing Capacity of Conical Footings	4-11
4.4.2	Adaptation of Model C for Conical Shape of Spudcans	4-12
4.4.2.1	Flat Plates	4-12
4.4.2.2	Conical Spudcans	4-13
<b>4.5</b>	<b>Implementation of Model C into JAKUP</b>	<b>4-14</b>
<b>4.6</b>	<b>Concluding Remarks</b>	<b>4-17</b>

## CHAPTER 5 - APPLICATION OF NEWWAVE THEORY IN THE ANALYSIS OF JACK-UP UNITS

<b>5.1</b>	<b>Introduction</b>	<b>5-1</b>
<b>5.2</b>	<b>Theoretical Background</b>	<b>5-1</b>
5.2.1	Linear Random Wave Theory	5-1
5.2.2	NewWave Theory	5-2
5.2.3	Wave Energy Spectrum	5-5
<b>5.3</b>	<b>Implementation of NewWave into JAKUP</b>	<b>5-7</b>

## Contents

5.3.1	Wave Dispersion Relationship	5-8
5.3.1.1	Implementation of NewWave in JAKUP - Dispersion Relationship	5-10
<b>5.4</b>	<b>NewWave Kinematics</b>	<b>5-10</b>
5.4.1	Theory	5-10
5.4.2	Example of NewWave Kinematics in JAKUP	5-12
5.4.3	Example Response of a Jack-Up Subjected to NewWave Loading	5-13
<b>5.5</b>	<b>Discussion of NewWave</b>	<b>5-14</b>
5.5.1	Calculation of Kinematics – Linear Stretching/Extrapolation Procedures	5-14
5.5.2	Second-Order NewWave Theory	5-15
5.5.2.1	The Second-Order Correction Suggested by Taylor (1992)	5-15
5.5.2.2	Second-Order NewWaves Suggested by Jensen (1996)	5-16
5.5.2.3	Comparisons of the Second-Order Formulations with Linear Kinematics	5-17

## CHAPTER 6 - EVALUATION OF EXTREME RESPONSE STATISTICS USING CONSTRAINED NEWWAVE

<b>6.1</b>	<b>Introduction</b>	<b>6-1</b>
<b>6.2</b>	<b>Theoretical Background</b>	<b>6-2</b>
6.2.1	Numerical Random Wave Simulation	6-2
6.2.1.1	Implementation in JAKUP	6-3
6.2.2	Constraining a NewWave into a Random Background	6-3
6.2.2.1	Example Response of a Jack-Up Subjected to a Constrained NewWave	6-5
<b>6.3</b>	<b>Using Constrained NewWave in the Evaluation of Response Statistics of Jack-Ups</b>	<b>6-6</b>
6.3.1	Overview	6-6
6.3.2	Methodology Adopted for the Evaluation of Short-Term Statistics	6-7
6.3.3	Example Numerical Results for One Sea-State ( $H_s = 12$ s and $T_z = 10.805$ s)	6-9
6.3.4	Verification of Short-Term Extreme Response Results	6-10
<b>6.4</b>	<b>Evaluation of Long-Term Statistics: A Numerical Experiment on an Example Jack-Up</b>	<b>6-11</b>
6.4.1	Overview	6-11
6.4.1.1	Review of Extrapolation Methods	6-11
6.4.1.2	Response Based Design Conditions	6-13
6.4.2	Example Calculations for a Central North Sea Jack-Up	6-13
6.4.3	First Long-Term Numerical Experiment - Wave Loading Only	6-15
6.4.3.1	Methodology Adopted to Numerically Scale Short-Term Extreme Response Distributions	6-17
6.4.3.2	Monte Carlo Sampling of Long-Term Extreme Exceedence Probabilities	6-19
6.4.3.3	Long-Term Loads on the Jack-Up Legs	6-20
6.4.4	Second Long-term Numerical Experiment - All Environmental Forces	6-21
6.4.5	Measuring the Relative Importance of the Random Background	6-22
6.4.6	Further Discussion of Long-Term Results	6-24

## CHAPTER 7 - APPLICATION OF PROBABILISTIC MODELS IN THE RESPONSE ANALYSIS OF JACK-UPS

<b>7.1</b>	<b>Introduction</b>	<b>7-1</b>
<b>7.2</b>	<b>Literature Review</b>	<b>7-2</b>
7.2.1	General Reliability Theory	7-2
7.2.2	Reliability Calculation Techniques	7-3
7.2.3	Use of Reliability Theory for the Analysis of Jack-Up Units	7-4
<b>7.3</b>	<b>Aims of Numerical Experiments</b>	<b>7-6</b>

<b>7.4</b>	<b>Use of the Response Surface Method (RSM)</b>	<b>7-7</b>
<b>7.5</b>	<b>Choice of Random Variables and their “Predicted” Variability</b>	<b>7-10</b>
7.5.1	Random Variables Influencing the Dynamic Response of Jack-Ups	7-11
7.5.2	Distributions of Random Variables used in Numerical Experiments	7-13
<b>7.6</b>	<b>Short-Term Analysis (100-year return period)</b>	<b>7-15</b>
7.6.1	NewWave with Most Probable Highest Amplitude ( <i>i.e.</i> $\alpha = 0.93H_s$ )	7-15
7.6.1.1	Calculating Probability of Exceedence Results from a Monte Carlo Simulation of the RS	7-16
7.6.1.2	The Mean Most Probable Highest Amplitude	7-16
7.6.1.3	How Precise is the Response Surface Fit?	7-17
7.6.1.4	Sensitivities of the Basic Random Variables	7-18
7.6.1.5	Calculations Using First Order Reliability Methods (FORM)	7-20
7.6.1.6	Using Only 7 Basic Random Variables – Repeat Calculation	7-22
7.6.2	Short-Term Sea-States with Variable Wave Amplitudes	7-23
7.6.2.1	Methodology Adopted	7-23
7.6.2.2	Numerical Experiment for 100-Year Return Period	7-24
<b>7.7</b>	<b>Long-Term Numerical Experiment with Probabilistic Random Variables</b>	<b>7-25</b>
7.7.1	Short-Term Results	7-25
7.7.2	Long-Term Results	7-27

## CHAPTER 8 – CONCLUDING REMARKS

<b>8.1</b>	<b>Introduction</b>	<b>8-1</b>
<b>8.2</b>	<b>Conclusions – Main Findings</b>	<b>8-1</b>
8.2.1	Foundation Modelling	8-1
8.2.2	Numerical Modelling of Random Wave Loading	8-2
8.2.3	Probabilistic Approach to Developing Extreme Response Statistics	8-3
<b>8.3</b>	<b>Directions for Future Work</b>	<b>8-5</b>
8.3.1	Extension to Three Dimensions	8-5
8.3.2	Foundation Theories for Spudcan Footings	8-6
8.3.3	Physical Validation of Model C	8-6
8.3.4	Wave Models	8-7
<b>8.4</b>	<b>Conclusion</b>	<b>8-8</b>
